At Planview our vision is simple:
**To help our customers get the most
out of their resources**

As the global leader in work and resource management, Planview makes it easier for all organizations to achieve their business goals.

Work and resource management is a new approach for a growing problem. Getting work done today – work that delivers on strategy – is becoming increasingly difficult. That is why you need to enable greater agility and cross-organizational alignment by bringing together traditionally independent domains.

To reach your goals, you must realize your resource potential.

Our comprehensive work and resource management solutions span every class of work, resource, and organization to address the varying needs of diverse and distributed teams, departments, and enterprises.

Strategic Planning

The Planview solution for strategic planning helps leaders bring strategy to life, from formulation to execution, across the organization. Leaders can translate their strategy into an enterprise roadmap for delivering the products and services that achieve their goals.

With a clear plan in place, executives can lead transformational change, monitor performance, and measure progress to accelerate strategy delivery.

To plan for our future, we must know where we are. To analyze and optimize, we need to understand our current and future plans. This is critical because 80% of our projects are running and 20% will be new every year.

By integrating strategy, planning, and delivery, the Planview solution for portfolio and resource management enables PMOs to optimize their portfolios, balance capacity against demand, link plans and resources to projects, and manage the underlying financials.

Stakeholders can visualize portfolio performance against plans and make decisions that ensure resources deliver the highest value projects for the business.

Product Innovation

The Planview solution for product innovation enables organizations to better align their product portfolios to their innovation strategy, and ensure that the right resources are available to deliver the most innovative, profitable, differentiated products to market faster, and on budget.

The solution automates the entire product lifecycle – from concept to end-of-life – to help organizations select winning product ideas to increase revenue, reduce time-to-market, and improve portfolio transparency to mitigate risk.

We knew there had to be a better way – a way to get efficiency out of our united businesses, build an execution powerhouse by improving the alignment of innovation with R&D and resources, and unlock trapped capacity by reducing current inefficiencies in resource data collection and analysis.

Newell Rubbermaid

Enterprise Architecture

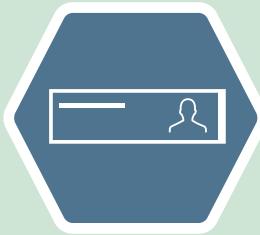

The Planview solution for enterprise architecture helps companies drive desired business outcomes by connecting technology to strategy.

Enterprise architects can engage stakeholders across the organization with powerful visualizations to roadmap the future technology portfolio, while realizing the full value of current technology resources.

As enterprise architects, we need to go to our CIO, and to our directors and our leadership, and be able to say: 'Here are our recommendations.' We need to show and prove that our recommendations will be successful.

Mosaic

Collaborative Work Management

The Planview solution for collaborative work management brings teams together to get things done.

Whether your team is down the hall or on the other side of the globe, collaborative work management provides everything teams need to set direction, communicate, execute tasks, track progress, and, ultimately, achieve goals, no matter where or how they work.

We love the flexibility of the solution and how much more it can do than emails. The way we were doing things in the past now seems so antiquated.

Comprehensive product lines to enable success

Planview Enterprise®

Enterprise-wide Portfolio and
Resource Management

Trouw®

Enterprise Capability and
Technology Management

Innotas®

Project Portfolio Management (PPM)
for Maturing Organizations

projectplace®

Collaborative Work Management
that Empowers Teams

Planview customers operationalize the execution of their strategic plans, ensure their resources are on strategy, embrace and manage change, strengthen every level of execution, drive innovation and improve time-to-market, optimize their technology portfolios, increase productivity of teams, and, ultimately, achieve their goals.

Planview Enterprise®

PMOs, EPMOs, services, and product organizations use Planview Enterprise to realize their strategy by connecting programs, projects, resources, and financials with the outcomes they deliver.

- Prioritize investments and balance resource capacity against pipeline demand
- Deliver programs using roadmaps to define timeframes and financials, then adjust based on forecasts and actuals
- Analyze portfolio and project performance for better decision making

Trouw®

Enterprise architects use Trouw to enable business model transformation and business outcomes by maximizing the impact of technology investments, while managing risks and costs.

- Define technology and capability roadmaps that support corporate strategy
- Deliver a flexible application and technology portfolio optimized for business strategy and capabilities
- Contextualize technology for the business with visualizations that combine interactive analysis with comprehensive modeling

Innotas®

PMOs and new product development organizations starting out in PPM use Innotas to manage projects and resources, improving visibility for decision making and governance.

- Ensure resources are working on the right projects at the right time
- Prioritize project portfolios with top-down planning
- Use real-time analytics to track, manage, and report on projects and resources

projectplace®

Projectplace helps anyone who manages work, especially “accidental” project managers, to collaborate and communicate across teams.

- Manage work, projects, tasks, and teams all in one place
- Boost productivity and increase team efficiency
- Utilize functional workspaces to set direction, communicate, track progress, and achieve goals

Realize your resource potential with Planview
